VENUS PANELIYA

Senior Full-Stack Engineer | MERN | AI Integrations

github.com/VenusCodes | venuspaneliya.com | venuspaneliya25@gmail.com | linkedin.com/in/venus-paneliya | +91 74059 41008

Full-stack engineer with 3+ years of experience architecting and shipping AI-powered B2B SaaS, fintech and creator economy platforms end to end.

SKILLS

Frontend: JavaScript (ES6+), TypeScript, React.js, Next.js, Redux Toolkit, HTML5, CSS3, Tailwind CSS, responsive browser-based applications

Backend and APIs: Node.js, Express.js, REST APIs, GraphQL, WebSockets (Socket.io), Webhooks, Strapi (headless CMS), microservices, third-party API integrations, authentication and authorization (OAuth, RBAC)

Databases: MySQL, SQL, PostgreSQL, MongoDB, AWS DynamoDB (NoSQL), Supabase, Redis, Firebase, row-level security

Cloud and DevOps: AWS (Lambda, DynamoDB, SQS, S3, EC2), Google Cloud Platform (GCP), Docker, CI/CD (GitHub Actions), Git, Vercel, Netlify, Heroku, monitoring and debugging

Mobile: React Native, Capacitor.js, iOS, Android, push notifications, location and maps

AI: OpenAI API, Claude API, RAG, AI agents and tool calling, MCP, tiktoken token validation, AI cost controls, Cursor, v0, Bolt, Lovable

Payments: Stripe Connect, PayPal, Authorize.net, insurer API integrations (ICICI Lombard)

Practices: Agile/Scrum, code review, production issue resolution, testing (Jest), Jira, Linear, Slack, Notion, Confluence

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer, Arj Global, *Remote (London, UK)* **Mar 2026 - Present**

- Own production architecture, security and compliance for the client's AI-built SaaS products, hardening prototypes for paying tenants.
- Built a multi-tenant AI form builder (Next.js, OpenAI API) that turns one sentence into a server-validated JSON form schema, cutting form creation from minutes to under 10 seconds.
- Isolated tenant data with Supabase and PostgreSQL row-level security, and added e-signatures with audit timestamps for compliance-sensitive forms.
- Kept AI cost per generation predictable as usage grew by adding server-side token caps, cached schemas and tuned prompts.

Full-Stack Consultant and Technical Project Manager, Independent, *Remote* **Oct 2024 - Present**

- Led a team of 5 developers on AI-powered SaaS for international clients through an agency engagement, owning architecture, sprint planning and code review; delivered 95% of milestones on time.
- Creator community platform (1,000+ paying members): replaced a half-built Stripe Connect integration that missed payouts with an owned payout ledger, verified webhooks, retries and alerts, automating $10K+ in monthly payouts with zero missed; a referral system added 25% organic sign-ups.
- Crowdsourced video platform: replaced manual video handling with a serverless AWS pipeline (S3, Lambda, SQS, dead-letter queues), reducing manual editing by 60% for 1,000+ users.
- QuirkBees Technologies: architected a payroll calculation engine used by 50+ SMEs, reducing calculation errors by 30%, and shipped a cross-platform iOS and Android app with Capacitor.

Software Engineer, Logix Built Solutions, *Surat, India* **Feb 2023 - Sep 2024**

- Cut insurance quote time from 10+ minutes to under 2 by profiling the flow, adding Redis caching, running 4 insurer API calls in parallel and tuning PostgreSQL indexes.
- Built real-money deposits and withdrawals on PayPal and Authorize.net with atomic wallet operations, plus Socket.io live scoring for thousands of concurrent users.
- Built a full-stack ERP with real-time inventory and sales dashboards.

PROJECT EXPERIENCE

- Immigration case portal (React, Node.js, PostgreSQL): replaced spreadsheets and email with a role-based portal for clients, attorneys and case managers, with a full audit trail; cut support queries by about 40%.
- Nonprofit learning platform (serverless): scoped launch to 3 core features and shipped on time, running at under $50 a month for the first 500 users.

EDUCATION

B.E., Computer Science and Engineering, Gujarat Technological University (RNGPIT), CGPA 9.29/10

AWS Academy Cloud Foundations, Amazon Web Services **Jun 2025**

Google Cloud Skill Badges (19): Deploy Kubernetes Applications, Use Machine Learning APIs, Create ML Models with BigQuery ML, Optimize Costs for GKE
